

Cap Cana, Dominican Republic

coastal engineering

The Cap Cana Development is a new world-class destination of unprecedented proportion located on the eastern tip of the Dominican Republic near Punta Cana. The project covers more than 6,000 acres including three (3) Jack Nicklaus golf courses, luxury hotels, real estate, beaches and one of the the largest planned marinas in the Caribbean with more than 1,000 slips.

Coastal Systems has been part of the design team since the inception of the project and has provided the following services:

- Topographic and Bathymetric Surveying
- Storm Surge and Wave Modeling
- Sediment Transport Analysis
- Geotechnical Evaluation
- Flushing Analysis of Marina
- Jetty and Breakwater Design
- Beach Design
- Marina Planning and Design
